this thought provoking book discusses the concept of progress in economics and investigates whether any advance has been made in its different spheres of research the authors look back at the history successes and failures of their respective fields and thoroughly examine the notion of progress from an epistemological and methodological perspective the idea of progress is particularly significant as the authors regard it as an essentially contested concept which can be defined in many ways theoretically or empirically locally or globally or as encouraging or impeding the existence of other research traditions the authors discuss the idea that for progress to make any sense there must be an accumulation of knowledge built up over time rather than the replacement of ideas by each successive generation accordingly they are not concerned with estimating the price of progress reminiscing in the past or assessing what has been lost instead they apply the complex mechanisms and machinery of the discipline to sub fields such as normative economics monetary economics trade and location theory austrian economics
